SUMMARY

Design Engineer with **5 years between design and code**: I design interfaces in Figma and build them in production. At Moneri I created the **design system for the B2B dashboard**, from legacy code to Figma and back into Vue, with **a Figma plugin and component generator I built**, and redesigned flows on a creator platform with 100k+ users. Communications degree (UFRJ) and a postgrad in UX Design (PUC-RS).

EXPERIENCE

Moneri *March 2021 — Present*

Frontend Developer → Design Engineer

- **B2B dashboard design system (in progress):** audited the production UI and extracted v1 from the code itself; designed v2 in Figma with variables and built **a Figma plugin and a Vue component generator** that take each component to code with tokens: **41 of 45 variants** match Figma within 1px and **100% of colors and text** are bound to tokens and above 4.5:1 contrast
- **Brand page redesign** on the creator platform (**100k+ users**): hierarchy reorganized around real use and per-brand white-label theming with automatic legibility adjustment, leading to **~20% fewer support tickets** about platform usage
- **Self-service onboarding for new brands:** from Sep 2024 to Sep 2025, **72 of 75 (96%)** Nuvemshop stores got onto the platform on their own, where before less than 10% of a waitlist almost twice that size made it in. Since the basic plan went free (May/25), **74%** of those who start onboarding reach the dashboard
- **UX/UI for new features, from idea to deploy,** in Vue.js and Nuxt.js, with REST API integrations
- **AI in the workflow:** tier-1 support agents with n8n and the Claude API, and AI-assisted development day to day

Freelance projects *2026*

- **Enjoy Rio, a quiz that recommends trips based on how you feel (live):** end-to-end design and development, from Figma proposals to a **React + TypeScript** front end. Recommendation engine with 7 emotional dimensions and 6 travel profiles, plus an **AI audit agent** that simulated answer combinations and caught biases before launch
- **Landing page for a startup accelerator:** Astro + Vercel, with forms feeding an automated evaluation pipeline and Notion reports

SKILLS

Design: Figma (variables, components, Plugin API), design systems and design tokens, prototyping, information architecture, UX writing, accessibility (WCAG)

Front end: Vue.js, Nuxt.js, React, TypeScript, JavaScript, HTML, CSS/SCSS, Tailwind CSS, Vite

Engineering: Node.js, REST APIs, Git/GitHub, CI/CD (GitHub Actions), testing with Jest and Vitest

AI: AI-assisted development (Claude Code, GitHub Copilot), automations and agents with n8n and the Claude API

EDUCATION & LANGUAGES

Pontifícia Universidade Católica do Rio Grande do Sul (PUC-RS) *March 2024 — July 2025*
Postgraduate degree in UX Design: design systems, accessibility, information architecture, AI in design

Universidade Federal do Rio de Janeiro (UFRJ) *Completed in 2021*
Bachelor's degree in Social Communication (Broadcasting)

Certifications: CS50's Introduction to Computer Science (Harvard, 2023) · Full Stack Open (Helsinki, 2023)

Languages: Portuguese (native), English (C2)
